FAMILY OVERVIEW

Based on a 64-bit GUI engine, the CL-GD543X/4X incorporates a BitBLT (bit block transfer) VGA controller with a 24-bit true-color DAC, dual-clock synthesizer, and direct-connect 32-bit PCI and VESA® VL-Bus™ interface. Optimized for Microsoft Windows®, Windows95™, Windows NT™, OS/2®, and other graphical interfaces, the Alpine family offers performance, surpassing current DRAM and many VRAM-based GUI accelerators.

The CL-GD543X/4X forms the heart of a cost-effective, high-performance DRAM-based graphics system. By combining a 32-bit external local bus interface with a 64-bit path to the DRAM frame buffer, the CL-GD543X/4X eliminates the video-memory bottleneck found in traditional DRAM architectures. This combination also maximizes system-to-video bandwidth critical for outstanding graphics acceleration.

BitBLT support, linear addressing, hardware cursor, color expansion, and memory-mapped I/O are some of the many built-in CL-GD543X/4X features that ensure outstanding GUI performance. The internal palette DAC can be configured for industry-standard 16- or 256-color VGA modes, or extended to high- and true-color modes (32K, 64K, or 16M colors).

The CL-GD5434-I, CL-GD5436, and CL-GD5440-I devices have an integrated clock filter and current reference that allow a low-cost board solution.

The highly integrated 208-pin PQFP package makes the CL-GD543X/4X ideal for both motherboard systems and add-in cards. The only external support needed is cost-effective DRAM memory and a 14.31818-MHz frequency reference.

CL-GD5430/34

The software- and pin-compatible CL-GD5430/34 allow OEMs to meet different price and performance targets with one graphic subsystem design. Built on a 1-Mbyte frame buffer, the CL-GD5430 can be quickly upgraded to the higher-performance CL-GD5434. With a 2-Mbyte frame buffer, the CL-GD5434 offers performance beyond current 32-bit standard and interleaved architectures.

Operating at pixel clock rates programmable to 135 MHz (CL-GD5434) and 86 MHz (CL-GD5430), the CL-GD543X devices supports standard and VESA high-resolution extended modes. Display resolutions up to 1280 × 1024 are supported.

CL-GD5436

The CL-GD5436 is a high-performance accelerated super VGA controller. The CL-GD5436 features a 64-bit BitBLT engine and a 64-bit display memory interface with support for EDO DRAMs.

Operating at pixel clock rates programmable to 135 MHz and memory clock rates programmable to 80 MHz, the CL-GD5436 supports resolutions and color depths at the following standard refresh rates:

Resolution	256 Colors	64K Colors	16M Colors
640 × 480	75 Hz	75 Hz	75 Hz
800 × 600	75 Hz	75 Hz	75 Hz
1024 × 768	75 Hz	75 Hz	75 Hz
1280 × 1024	75 Hz	43i Hz	—

The CL-GD5436 supports Packed-24 RGB video modes, providing 16M colors at only 3 bytes per pixel. This allows 1024 × 768 true color at a 75-Hz refresh rate with DRAMs. The CL-GD5436 also supports three types of byte-swapping on the PCI bus, which provide PowerPC™ support.

CL-GD5440

The CL-GD5440 is the first product in its class to integrate on a single chip the CL-GD5430 (32-bit graphics accelerator) and the CL-PX2070/85 video-processor accelerator (video technology from Pixel Semiconductor). Hardware-accelerated zoom with X and Y linear interpolation and color space conversion are combined with an enhanced BitBLT accelerator, integrated 24-bit RAMDAC, and a dual-clock synthesizer.

The CL-GD5440 accelerates both graphics and video playback for Microsoft Windows and Windows NT, OS/2, and other graphical interfaces. High-quality video playback is supported in both 64K, and the popular 256-color modes, allowing video playback without compromising graphics performance.

Operating at pixel clock rates programmable to 86 MHz, the CL-GD5440 supports standard and VESA high-resolution extended modes. Display resolutions up to 1280 × 1024 are supported.

A flexible 512-Kbyte to 2-Mbyte frame buffer, glueless PCI and VESA VL-Bus interface, and direct interface to NTSC/PAL decoder (and fully integrated video/graphics accelerator) provides OEMs with a cost-effective multimedia solution.

CD-Zoom, 'on-the-fly' color space conversion, video data encoding/decoding, and a multi-format frame buffer are integrated features that ensure high-performance video playback.
